

# **Summary of the 2018 ERA-EDTA Registry Annual Report**

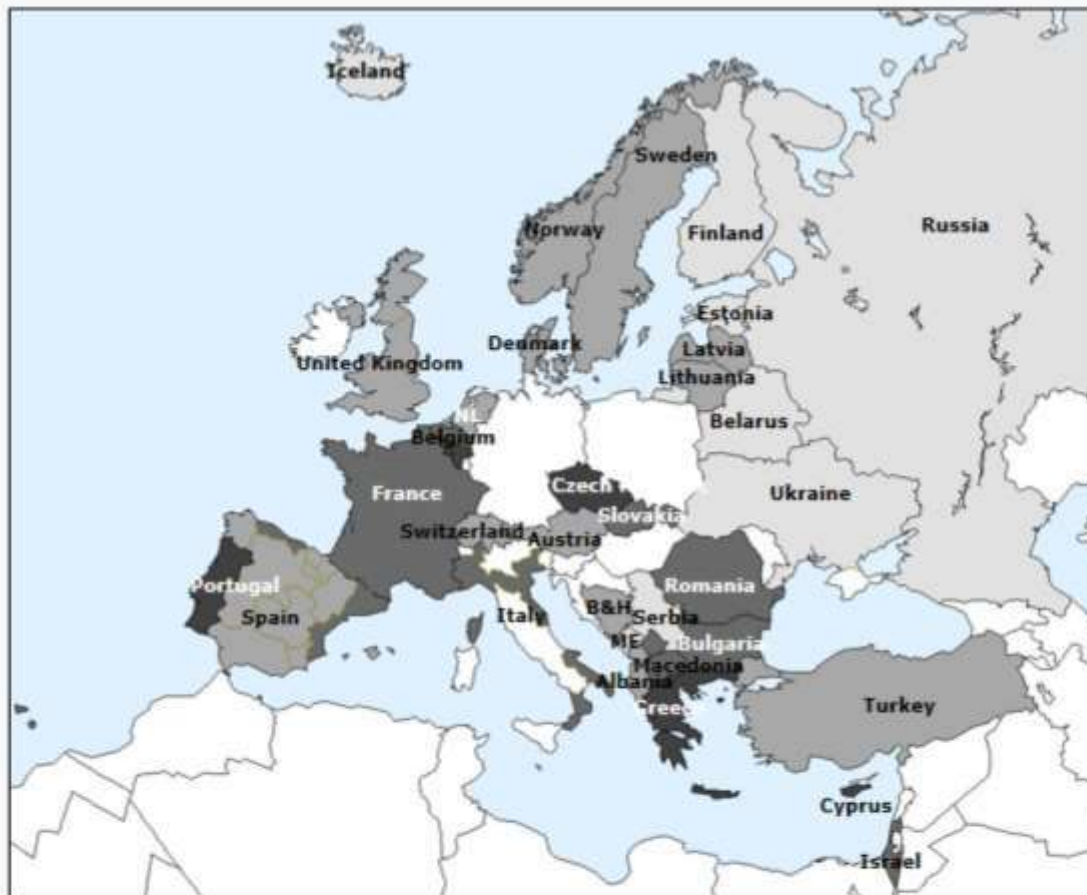

# National and regional renal registries that contributed data to the 2018 ERA-EDTA Registry Annual Report

-  Renal registries contributing with individual patient data
-  Renal registries contributing with aggregated data

# Incident patients accepted for RRT in 2018, at day 1

*by country*

- <100 pmp
- 100-149 pmp
- 150-199 pmp
- ≥200 pmp
- No data available

# Incident patients accepted for RRT in 2018 at day 1 by country

## Unadjusted incidence

renal registries providing individual patient data

## Unadjusted incidence

renal registries providing aggregated data

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> the incidence is underestimated by 2%; <sup>c</sup> data includes patients receiving dialysis only

# Incident patients accepted for RRT in 2018 at day 1

*by country  
adjusted for age and sex*

## Adjusted incidence

*renal registries providing individual patient data*

## Adjusted incidence

*renal registries providing aggregated data*

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> the incidence is underestimated by 2%; <sup>c</sup> data includes patients receiving dialysis only

# Incident patients accepted for RRT in 2018 at day 1 *mean age*

## Mean age at start of RRT

*renal registries providing individual patient data*

## Mean age at start of RRT

*renal registries providing aggregated data*

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> data includes patients receiving dialysis only

# Incident patients accepted for RRT in 2018, at day 1

registries providing individual patient data only

## Mean age at start of RRT

*male patients*

## Mean age at start of RRT

*female patients*

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> data includes patients receiving dialysis only

# Incident patients accepted for RRT in 2018, at day 1

*by age category*

**Incidence by age category**  
*for all registries*

**Incidence by age category**  
*by type of data provided by registry*

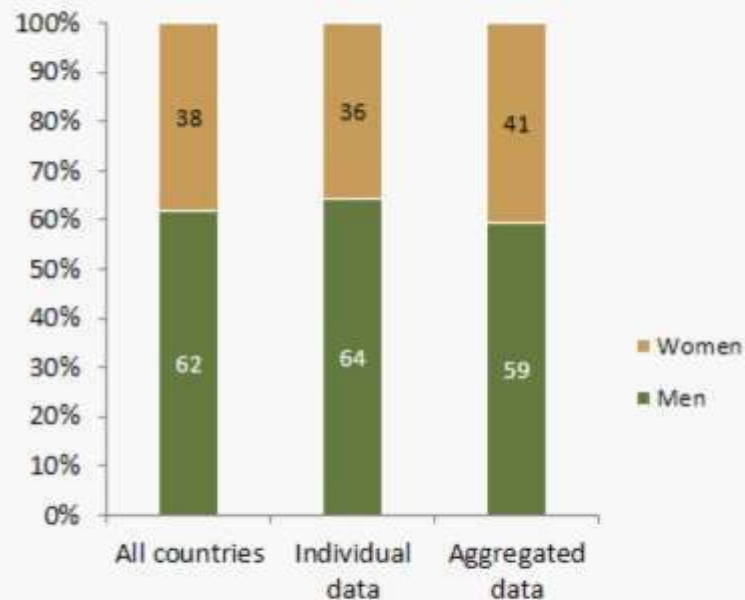

# Incident patients accepted for RRT in 2018, at day 1

*by sex*

**Incidence by sex**  
*for all registries*

**Incidence by sex**  
*by type of data provided by registry*

# Incident patients accepted for RRT in 2018, at day 1

*by primary renal disease*

**Incidence by primary renal disease**  
*for all registries*

**Incidence by primary renal disease**  
*by type of data provided by registry*

# Incident patients accepted for RRT in 2018, at day 1

*by primary renal disease and age category*

## Incidence by primary renal disease

*patients from registries providing individual patient data only*

**all patients**

**patients younger than 65 years  
of age at the start of RRT**

**patients aged 65 years or older  
at the start of RRT**

# Incident patients accepted for RRT in 2018, at day 91 *by established modality*

**Incidence at day 91  
by established modality**  
*for all registries*

**Incidence at day 91  
by established modality**  
*by type of data provided by registry*

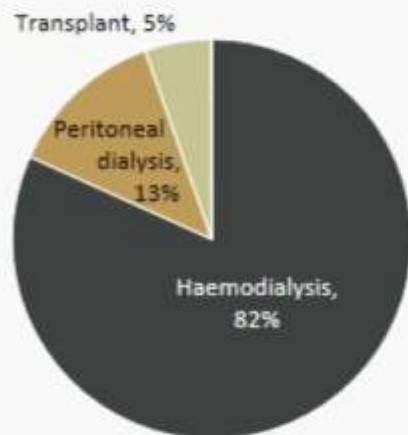

# Incident patients accepted for RRT in 2018, at day 91

*by established modality and age category*

## Incidence at day 91 by established modality

*patients from registries providing individual patient data only*

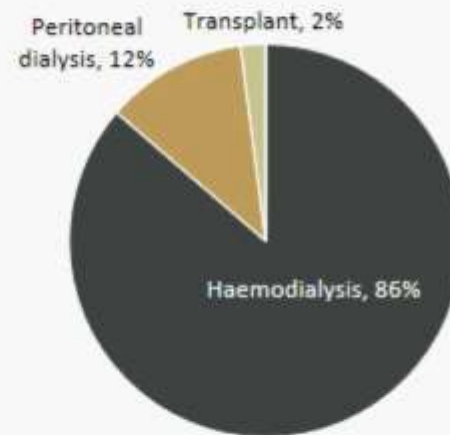

all patients

patients younger than 65 years  
of age at the start of RRT

patients aged 65 years or older  
at the start of RRT

# Incident patients accepted for RRT, at day 1

*last 20 years (1999-2018)*

**Unadjusted incidence over time**  
*all patients starting RRT*

**Adjusted incidence over time**  
*all patients starting RRT*

# Incident patients accepted for RRT, at day 1

*last 15 years (2004-2018)*

**Unadjusted incidence over time**  
*all patients starting RRT*

**Adjusted incidence over time**  
*all patients starting RRT*

# Incident patients accepted for RRT, at day 1

*last 10 years (2009-2018)*

**Unadjusted incidence over time**  
*all patients starting RRT*

**Adjusted incidence over time**  
*all patients starting RRT*

# Incident patients accepted for RRT, at day 1

*last 5 years (2014-2018)*

### Unadjusted incidence over time

*all patients starting RRT*

### Adjusted incidence over time

*all patients starting RRT*

# Prevalent patients on RRT in 2018

*by country*

- <750 pmp
- 750-999 pmp
- 1000-1499 pmp
- ≥ 1500 pmp
- No data available

# Prevalent patients on RRT in 2018 by country

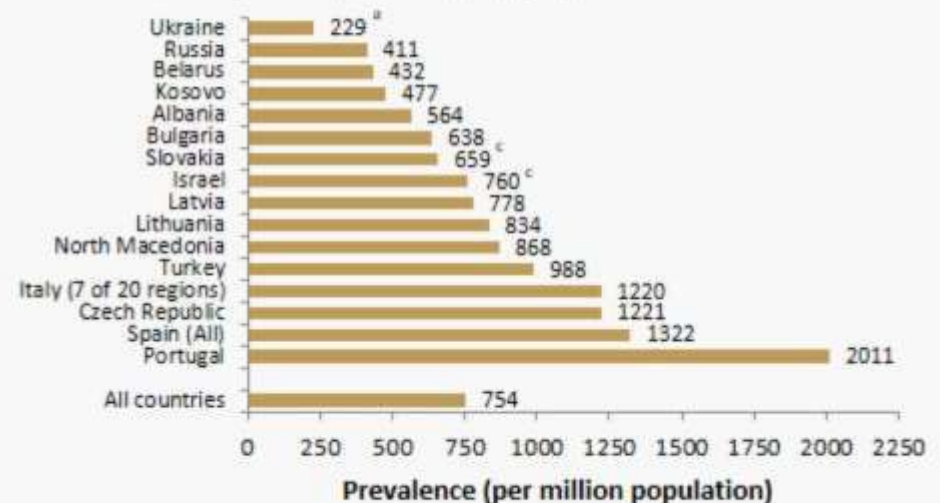

## Unadjusted prevalence

renal registries providing individual patient data

## Unadjusted prevalence

renal registries providing aggregated data

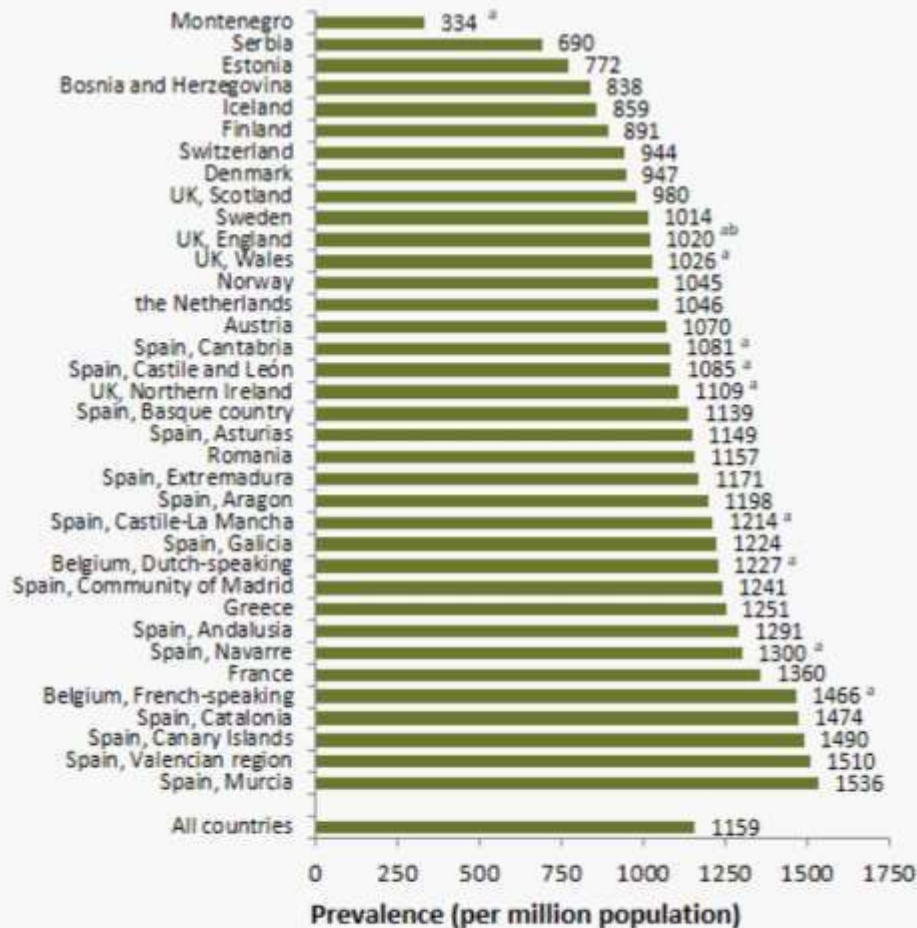

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> the prevalence is underestimated by 1%; <sup>c</sup> data includes patients receiving dialysis only

# Prevalent patients on RRT in 2018

## Adjusted prevalence

renal registries providing individual patient data

by country  
adjusted for age and sex

## Adjusted prevalence

renal registries providing aggregated data

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> the prevalence is underestimated by 1%; <sup>c</sup> data includes patients receiving dialysis only

# Prevalent patients on RRT in 2018

mean age

## Mean age on 31 December 2018

renal registries providing individual patient data

## Mean age on 31 December 2018

renal registries providing aggregated data

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> data includes patients receiving dialysis only

# Prevalent patients on RRT in 2018

*for registries providing individual patient data only*

## Mean age on 31 December 2018

*male patients*

## Mean age on 31 December 2018

*female patients*

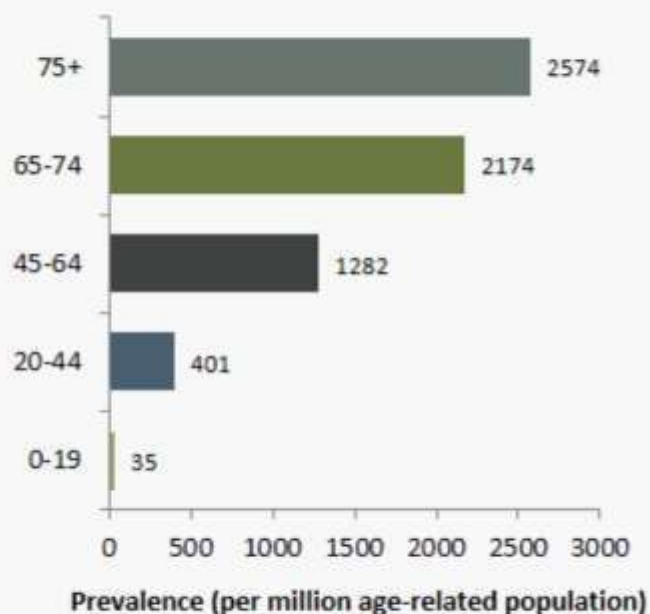

<sup>a</sup> patients younger than 20 years of age are not included; <sup>b</sup> data includes patients receiving dialysis only

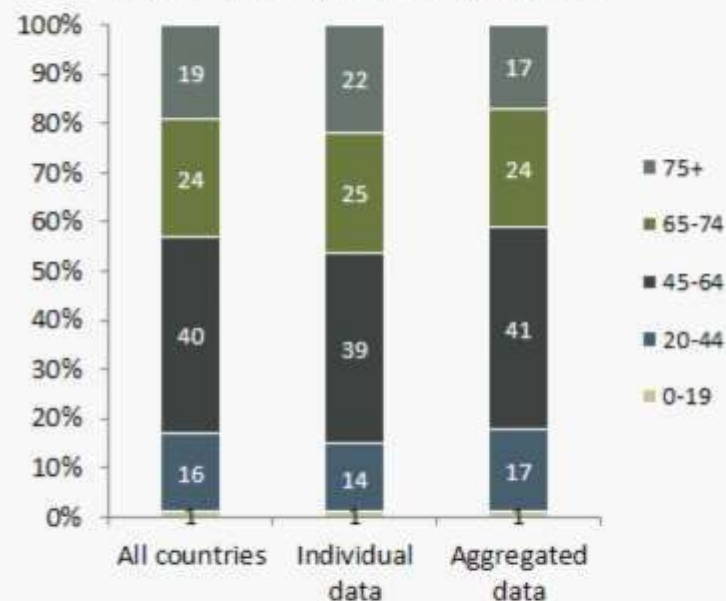

# Prevalent patients on RRT in 2018

*by age category*

**Prevalence by age category**  
*for all registries*

**Prevalence by age category**  
*by type of data provided by registry*

# Prevalent patients on RRT in 2018

*by sex*

**Prevalence by sex**  
*for all registries*

**Prevalence by sex**  
*by type of data provided by registry*

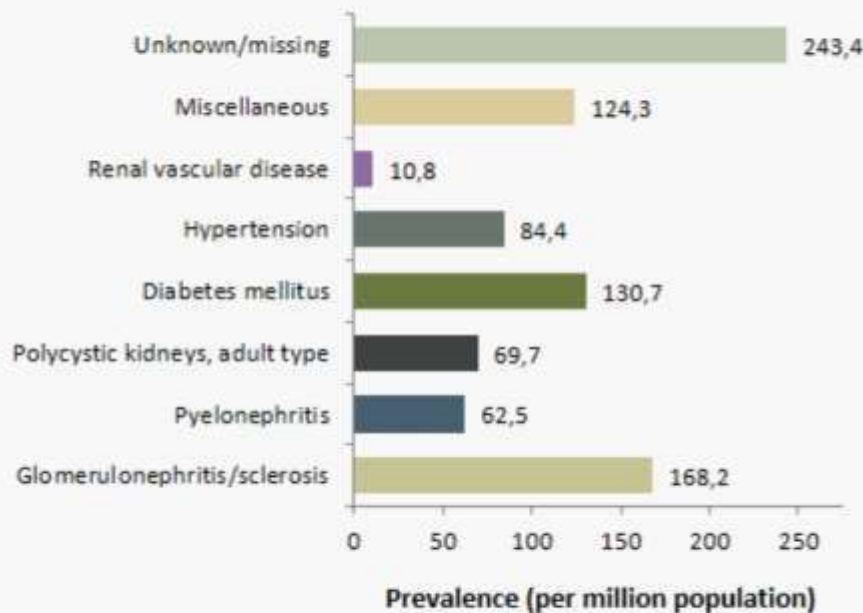

# Prevalent patients on RRT in 2018

*by primary renal disease*

**Prevalence by primary renal disease**  
*for all registries*

**Prevalence by primary renal disease**  
*by type of data provided by registry*

# Prevalent patients on RRT in 2018

*by primary renal disease and age category*

## Prevalence by primary renal disease

*patients from registries providing individual patient data only*

all patients

patients younger than 65 years of age

patients aged 65 years or older

# Prevalent patients on RRT in 2018

*by modality*

**Prevalence by modality**  
*for all registries*

**Prevalence by modality**  
*by type of data provided by registry*

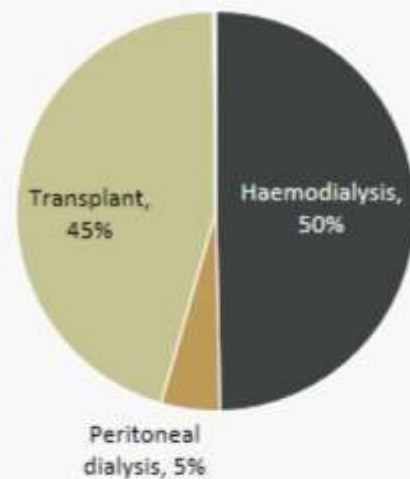

# Prevalent patients on RRT in 2018

*by modality and age category*

## Prevalence by modality

*patients from registries providing individual patient data only*

**all patients**

**patients younger than 65 years of age**

**patients aged 65 years or older**

# Prevalent patients on RRT

*last 20 years (1999-2018)*

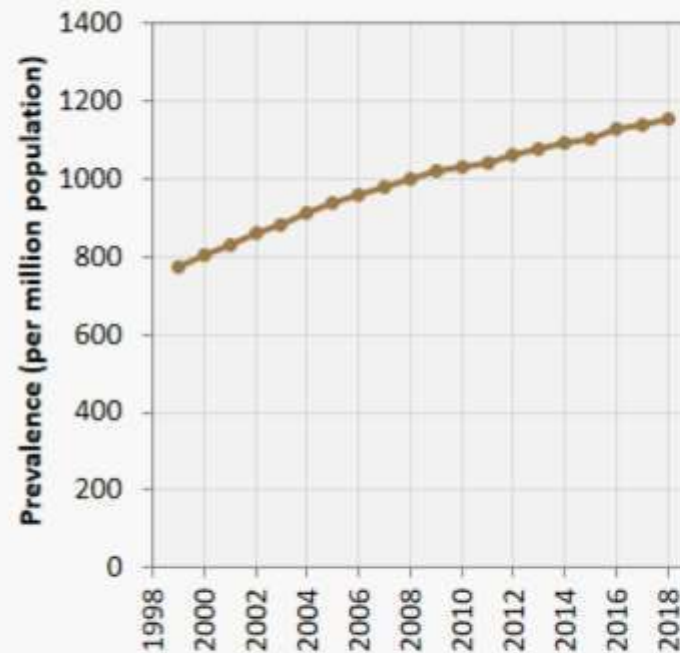

## Unadjusted prevalence over time

## Adjusted prevalence over time

*all patients on RRT*

# Kidney transplants performed in 2018

by country

## Kidney transplants performed

renal registries providing individual patient data

## Kidney transplants performed

renal registries providing aggregated data

<sup>a</sup> patients younger than 20 years of age are not included; <sup>bcd</sup> transplant rates are underestimated by 15% (b), 30% (c), 7% (d)

# Kidney transplants performed in 2018

*transplants from deceased donors by country*

## Deceased donor transplant rate

*renal registries providing individual patient data*

## Deceased donor transplant rate

*renal registries providing aggregated data*

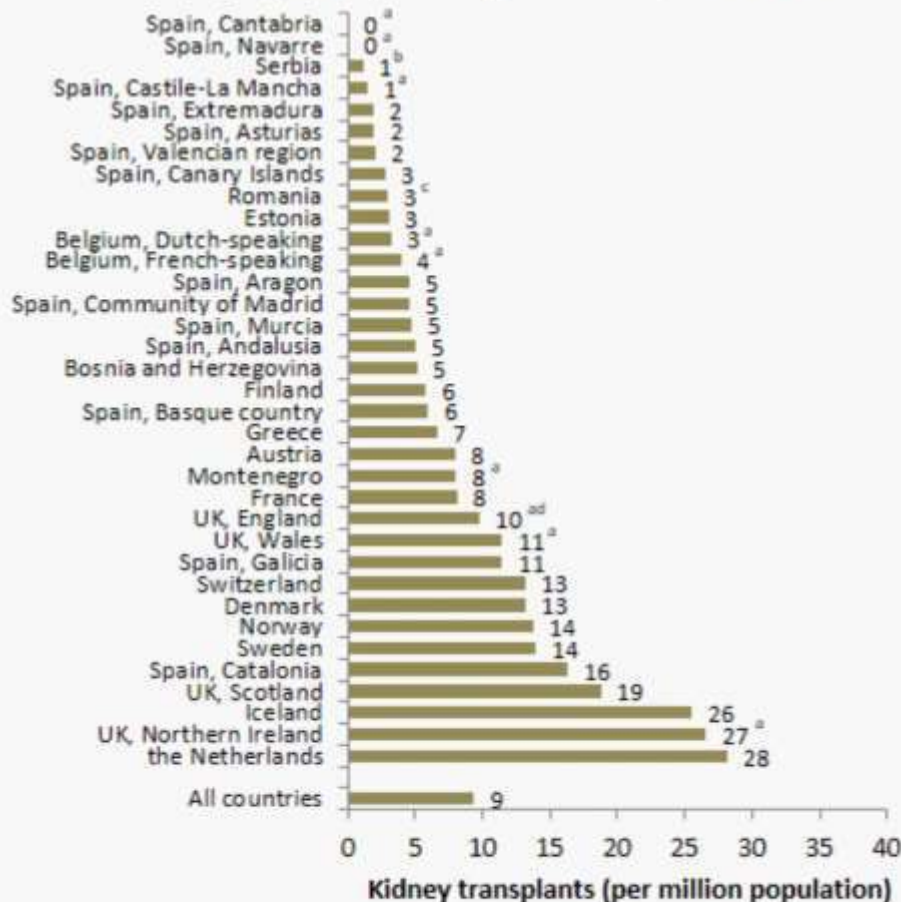

<sup>a</sup> patients younger than 20 years of age are not included; <sup>bcd</sup> transplant rates are underestimated by 15% (b), 30% (c), 7% (d)

# Kidney transplants performed in 2018

*transplants from living donors  
by country*

## Living donor transplant rate

*renal registries providing individual patient data*

## Living donor transplant rate

*renal registries providing aggregated data*

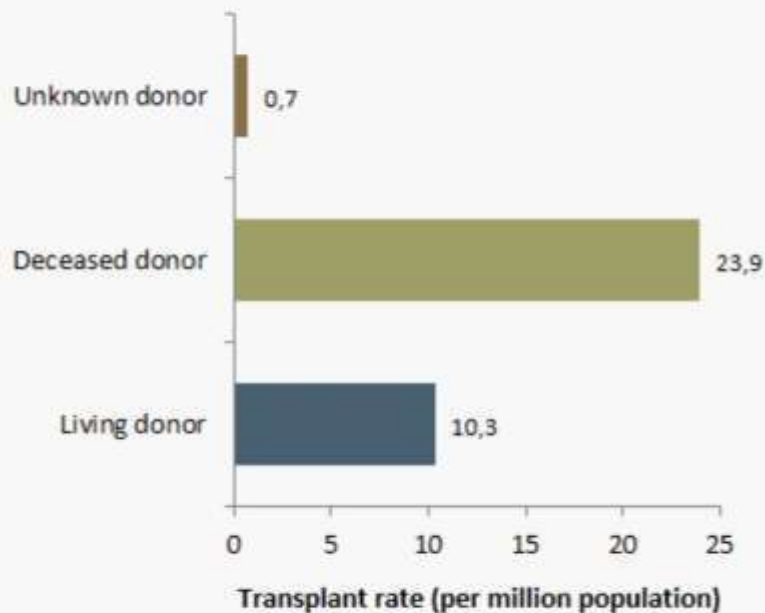

<sup>a</sup> patients younger than 20 years of age are not included; <sup>bcd</sup> transplant rates are underestimated by 15% (b), 30% (c), 7% (d)

# Kidney transplants performed in 2018

*by donor type*

**Kidney transplants by donor type**  
*for all registries*

**Kidney transplants by donor type**  
*by type of data provided by registry*

# Kidney transplants performed in 2018

*by donor type*

## Kidney transplants by donor type

*patients from registries providing individual patient data only*

**all patients**

**patients younger than 65 years of age on transplantation**

**patients aged 65 years or older on transplantation**

# Survival probability cohort 2009-2013

*by primary renal disease*

## Adjusted patient survival by primary renal disease Incident RRT patients

*from day 1, adjusted for age and sex*

*Survival probabilities were adjusted for fixed values for age (67 years), sex (63% men), and the primary renal disease distribution (24% diabetes mellitus, 19% hypertension / renal vascular disease, 11% glomerulonephritis and 46% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Survival probability cohort 2009-2013

*by dialysis modality*

## Adjusted patient survival by modality Incident dialysis patients

*from day 91, adjusted for age, sex, and primary renal disease*

*Survival probabilities were adjusted for fixed values for age (67 years), sex (63% men), and the primary renal disease distribution (24% diabetes mellitus, 19% hypertension / renal vascular disease, 11% glomerulonephritis and 46% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Survival probability cohort 2009-2013

*by kidney donor*

## Adjusted patient survival by donor type Patients receiving a first kidney transplant

*from day of transplant, adjusted for age, sex, and primary renal disease*

*Survival probabilities were adjusted for fixed values for age (50 years), sex (63% men), and the primary renal disease distribution (14% diabetes mellitus, 10% hypertension / renal vascular disease, 23% glomerulonephritis and 53% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Patient survival on RRT *by cohort*

## Patient survival incident RRT patients

*adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (67 years), sex (63% men), and the primary renal disease distribution (24% diabetes mellitus, 19% hypertension / renal vascular disease, 11% glomerulonephritis and 46% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Patient survival on RRT *by cohort*

## Patient survival incident RRT patients

*adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (67 years), sex (63% men), and the primary renal disease distribution (24% diabetes mellitus, 19% hypertension / renal vascular disease, 11% glomerulonephritis and 46% other primary renal diseases).*

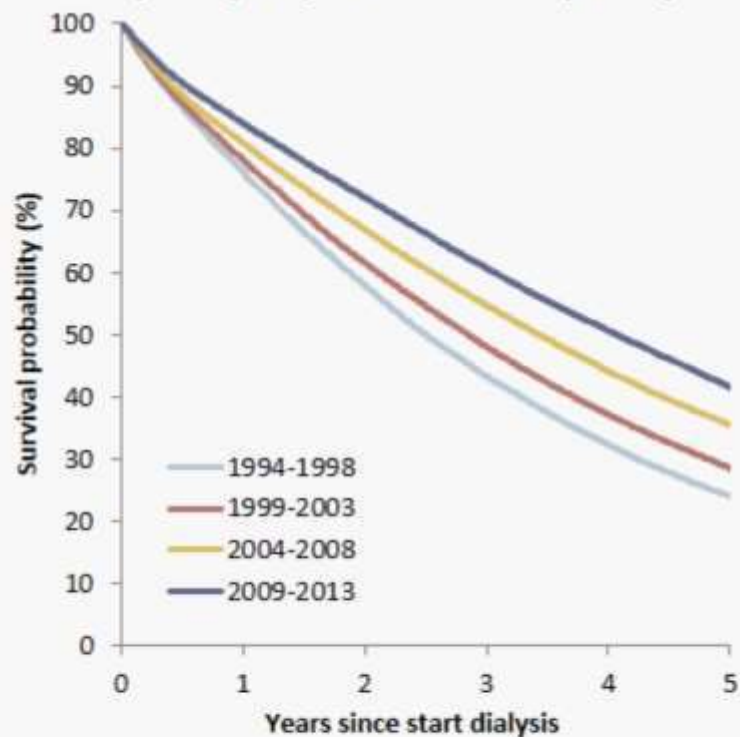

*Cox regression model was used to calculate survival probabilities.*

# Patient survival on dialysis

*by cohort*

## Patient survival incident dialysis patients

*adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (67 years), sex (63% men), and the primary renal disease distribution (24% diabetes mellitus, 19% hypertension / renal vascular disease, 11% glomerulonephritis and 46% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Patient survival on dialysis

*by cohort*

## Patient survival incident dialysis patients

*adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (67 years), sex (63% men), and the primary renal disease distribution (24% diabetes mellitus, 19% hypertension / renal vascular disease, 11% glomerulonephritis and 46% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Patient survival after kidney transplantation

*by cohort*

## Patient survival after first kidney transplantation

*adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (50 years), sex (63% men), and the primary renal disease distribution (14% diabetes mellitus, 10% hypertension / renal vascular disease, 23% glomerulonephritis and 53% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Patient survival after kidney transplantation

*by cohort*

## Patient survival after first kidney transplantation *adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (50 years), sex (63% men), and the primary renal disease distribution (14% diabetes mellitus, 10% hypertension / renal vascular disease, 23% glomerulonephritis and 53% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Graft survival after kidney transplantation

*by cohort*

## Graft survival after first kidney transplantation *adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (50 years), sex (63% men), and the primary renal disease distribution (14% diabetes mellitus, 10% hypertension / renal vascular disease, 23% glomerulonephritis and 53% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*

# Graft survival after kidney transplantation

*by cohort*

Graft survival  
after first kidney transplantation  
*adjusted for age, sex and cause of renal failure*

*Survival probabilities were adjusted for fixed values for age (50 years), sex (63% men), and the primary renal disease distribution (14% diabetes mellitus, 10% hypertension / renal vascular disease, 23% glomerulonephritis and 53% other primary renal diseases).*

*Cox regression model was used to calculate survival probabilities.*
